

AIMS Small Research Grants in Climate Change Science

Second Call for Applications

The African Institute for Mathematical Sciences Next Einstein Initiative (AIMS NEI) is pleased to invite early career African academics of postdoctoral standing to apply for the second round of the [AIMS Small Research Grants in Climate Change Science](#). Applications must be submitted by the 08th September 2019, 23:59 CAT.

From energy exploitation and agriculture, to urbanization, transportation and the construction of infrastructure, African countries have a unique opportunity to establish 'Climate Smart' economies by applying research-based concepts to reduce greenhouse gas emissions while creating economic value. This requires a deeper understanding of the casual factors of climate change and how best to apply the increasing volume of climate change-related information to mitigate, beneficially exploit, and/or adapt to the impacts of climate change on humans, the environment, and the economy. African scientists are hereby called upon to apply for Small Research Grants to support projects that would address these and other, related issues, and contribute to the development of 'greener' and 'smarter' economies in Africa.

These Grants will support projects that are at the upper limit of the research-innovation value chain -- i.e. projects that are likely to make a tangible impact. Such projects could be industry-led, community-driven, or policy-led, among other possibilities. These projects should make substantive use of mathematical concepts to provide solutions to climate change issues in Africa. Projects will be supported for a period of 6 to 12 months at a non-recurring maximum cost of USD 10 000 per Grantee.

This Small Research Grants Program in Climate Change Science is made possible by a grant from the International Development Research Centre, Ottawa, Canada, www.idrc.ca, and financial support from the Government of Canada provided through Global Affairs Canada (GAC), www.international.gc.ca, under the Mathematical Sciences for Climate Change Resilience Program administered by the AIMS Global Secretariat.

The objectives of the AIMS Small Research Grants Program in Climate Change Science are to provide funding:

- ❖ to support the development of early career African academics of postdoctoral standing (or equivalent) who are seeking to establish an independent research/professional

- career in the climate change science discipline or the mathematical sciences with applications in climate change;
- ❖ for new and innovative cutting-edge projects, including industry-led, community-, and policy-driven projects in climate change science that make substantive use of mathematical concepts;
 - ❖ to support proof-of-concept or pilot projects that are geared towards addressing a well-defined climate change challenge in Africa;
 - ❖ for projects that will promote uptake of research-based outputs/results in climate change science for the benefit of countries in Africa and the world at large; and
 - ❖ to increase intra- and inter-continental interactions between AIMS Centres of Excellence and other institutions.

Requirements

- ❖ Applicants should be of African descent but could be residing anywhere in the world.
- ❖ Applicants must hold a doctorate in a quantitative discipline including, but not limited to, applied mathematics, climatology, physics, chemistry, computer science, statistical ecology, or engineering.
- ❖ Applicants not based in Africa must be able to hold the grant in an institution on the continent.
- ❖ Applicants should demonstrate evidence of research in either climate change science with applications of mathematical concepts or in mathematical sciences with practical applications to climate change adaptation, mitigation or resilience.
- ❖ Applicants should demonstrate expertise or ability to (co-)supervise Master's and/or PhD students if intending to establish a research group/team. Such a research group/team could be established in collaboration with a senior project advisor. The Grantee must have a recognized (co-)supervisory role in the project.
- ❖ Applicants should demonstrate an ability to translate climate change science research concepts into applicable solutions or recommendations. This is particularly important for proof-of-concept, pilot, industry-led, policy-, and community-driven projects.
- ❖ Applicants must be willing to hold an affiliation at an AIMS Centre of their choice and spend a portion of their grant time in that Centre as a visiting researcher, should the need arise.
- ❖ Applicants should be willing to actively participate in a conference that will be organized as part of the Mathematical Sciences for Climate Change Resilience program.
- ❖ Applicants must be willing to contribute to a non-technical publication/bulletin which will highlight their work.
- ❖ Applicants should be able to take up the grant within four months of receiving the grant award letter.

How to apply

Applicants are advised to familiarise themselves with the [‘Terms of Reference’](#) documents for Grantees before starting the application process.

Applications should be submitted before the 08th September 2019, 23:59 CAT, using the [online application form](#) which should contain the following supporting documents:

- ❖ a completed [personal details form](#);
- ❖ a completed [project proposal form](#);
- ❖ a curriculum vitae;
- ❖ a letter of motivation; and
- ❖ an electronic copy of three significant representative publications in climate change science.

Three referees should email confidential letters of support directly to ms4cr-smallgrants@nexteinstein.org (with the subject line “MS4CR small grant application support letter – first and last name of applicant”) on or before the application deadline. Applicants should provide their referees with a copy of the [Terms of Reference](#) for the Small Research Grants and the [Instructions for Referees](#).

Only complete applications received by the application deadline will be considered.
